Import XML to Excel (Macro)

Import XML to Excel
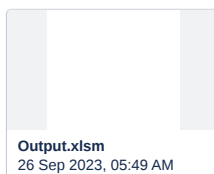

- Tried calling vbs, but some of the functions won't work in PA.

✅ Solution - Use macro enabled excel

```vba
Sub ImportXML()
Dim xmFile As String
Application.DisplayAlerts = False
xmFile = "E:\OneDrive - 10xDS\Learning\PA\PAD Work files\XML2Excel\xmlfile.xml"
Workbooks.OpenXML Filename:=xmFile, LoadOption:=xlXmlLoadImportToList
Application.DisplayAlerts = False
ActiveWorkbook.SaveCopyAs "E:\OneDrive - 10xDS\Learning\PA\PAD Work files\XML2Excel\out.xlsx"
End Sub

```

Paste the above code in Macro-enabled Excel (.xlsm) and run the macro using the "Run Excel Macro" action in Power Automate DEsktop. This will create an output Excel named *out.xlsx*

Output.xlsm
26 Sep 2023, 05:49 AM

the above file contains the macro.

To Pass the file paths as arguments, use the below code

```vba
Sub ImportXML(xmlPath As String, outExcelPath As String)
Dim xmFile As String
Application.DisplayAlerts = False
xmFile = xmlPath
Workbooks.OpenXML Filename:=xmFile, LoadOption:=xlXmlLoadImportToList
Application.DisplayAlerts = False
ActiveWorkbook.SaveCopyAs outExcelPath
End Sub

```

Output -with ar… ts.xlsm
